Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	2 Marks

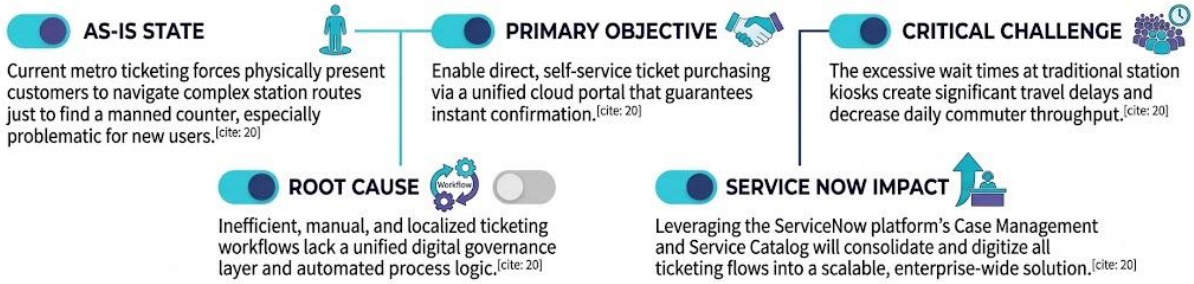

Customer Problem Statement:

Urban metro transit systems continuously encounter severe operational bottlenecks in handling ticket issuance and passenger flow, particularly during rush hours. Commuters are forced to stand in long physical queues at ticket counters and kiosks, causing severe transit delays, passenger frustration, and operational congestion across stations.

Traditional ticketing frameworks heavily depend on manual fare estimation, physical paper/token distribution, and decentralized monitoring. This manual approach increases overhead labor costs and exposes transit authorities to issues like lost or damaged physical tickets, revenue leaks, and lack of real-time passenger flow data.

Furthermore, without a unified, enterprise-grade cloud service portal, transit operators lack centralized visibility to monitor ticket volumes, track revenue analytics, or streamline commuter service requests. Addressing these issues requires an automated, cloud-based, and scalable ticketing infrastructure that digitizes the end-to-end booking experience.

The proposed Metro Ticket Booking System leverages ServiceNow as an enterprise ITSM platform to digitize the entire ticketing lifecycle. Passengers can instantly request tickets online, benefit from automated station-to-station fare calculation, receive dynamic QR-code tickets for gate scanning, and receive real-time notifications. This solution minimizes manual intervention, reduces station congestion, and delivers a modern, frictionless commuter experience.

AS-IS STATE
Current metro ticketing forces physically present customers to navigate complex station routes just to find a manned counter, especially problematic for new users.[cite: 20]
PRIMARY OBJECTIVE
Enable direct, self-service ticket purchasing via a unified cloud portal that guarantees instant confirmation.[cite: 20]
CRITICAL CHALLENGE
The excessive wait times at traditional station kiosks create significant travel delays and decrease daily commuter throughput.[cite: 20]
ROOT CAUSE
Workflow
Inefficient, manual, and localized ticketing workflows lack a unified digital governance layer and automated process logic.[cite: 20]
SERVICE NOW IMPACT
Leveraging the ServiceNow platform's Case Management and Service Catalog will consolidate and digitize all ticketing flows into a scalable, enterprise-wide solution.[cite: 20]
