Project Design Phase
Proposed Solution Template

Date	03-10-2026
Team ID	23KD1A4233
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Commuters experience bottleneck delays, manual pricing inaccuracies, and operational overhead due to legacy, paper-based ticketing queues. This project digitizes and automates the ticketing workflow end-to-end to streamline urban transit access.
2.	Idea / Solution description	A cloud-native transit platform built on ServiceNow leveraging a self-service Portal UI, client/server-side fare evaluation engines, automated workflow dispatchers, and encrypted QR pass generators for instant digital ticket issuance.
3.	Novelty / Uniqueness	Consolidates catalog-driven service requests, dynamic fare computation, automated Requested Item (RITM) tracking, instant QR code attachments, and admin reporting into a single, cohesive ServiceNow SaaS architecture.
4.	Social Impact / Customer Satisfaction	Eliminates physical station lines, enables contactless boarding, shortens travel preparation time, and delivers a modern, reliable commuting experience for passengers.

5.	Business Model (Revenue Model)	Primary revenue stems from direct digital ticket and pass sales, supplemented by multi-tier subscription plans, targeted platform ad space, and partner gateway processing fees.
6.	Scalability of the Solution	The solution is built on the ServiceNow cloud platform and can easily scale to support additional metro stations, routes, users, ticket volumes, and future enhancements such as mobile applications, payment gateways, and smart transit integrations.
